

# DEBUG TURBO

## RECOMMENDATIONS FOR MUSHROOMS

DEBUG TURBO is a neem based (containing about 67% Neem extract with Azadirachtin and 20% Synergist) insecticide, anti-feedant, repellent, and growth regulator. We recommend the use of DEBUG TURBO by itself with no additional pesticides unless the insects reach economically damaging levels, in which case organic pesticides may be used in conjunction with DEBUG TURBO. Apply even if there is no insect problem, as a preventative. Apply early morning or late evening.

DEBUG TURBO EC has been found to be compatible with most commonly used insecticides, fungicides and acaricides except Boardeux mixture or alkaline materials.

### **Application method and equipment:**

DEBUG TURBO can be applied as a drench to soil or non-soil media (Compost in Mushroom houses) to control insects and nematodes. Avoid leaching. To repel adults apply through fogging equipment.

DEBUG TURBO EC can be applied by using any powered or manual pesticide application equipment which includes high volume, low volume, fogging, and chemigation.

**DEBUG TURBO EC can control Mushroom Cidid Flies, Phorid Flies, and nematodes. DEBUG TURBO EC can be used in mushrooms such as Agaricus, enoki, maitake, oyster, shitake, and other speciality mushrooms.**

<b>USE RATES FOR MUSHROOMS</b>		
PEST	RATE Per 1000 Sq.Ft.	Recommendations
Mushroom Cidid Flies, Phorid Flies and Nematodes	1 to 2 oz DEBUG TURBO mixed with enough quantity of water so as to completely drench the area.	Apply as drench to the casing layer, media or compost. Make at least 4 to 5 applications 7 to 10 days apart.  To repel adults, apply with fogging equipment as soon as adults are seen flying. Mix into casing layer or into media during spawn run. Can be applied between breaks until harvest of final flush.
